Αθήνα 20 Σεπτεμβρίου 2025

4 τύποι Προϋπολογισμού για το φάρμακο

No budget

(means that there is no constraint on health expenditure. The price of a new drug is not relevant to the new drug adoption decision in this context)

An unconstrained budget

(is one that is expanded to accommodate any purchase that has an ICER at or below the maxWTP, where this maxWTP is defined by the social decision maker as in the endogenous budget)

A constrained budget

(can be expanded by a trigger such as the decision to finance a new drug, but there is a foregone benefit to the expansion to finance a drug; other health and non-health programmes or investments could instead have been expanded or implemented)

A fixed budget

(cannot be expanded and any additional purchases can be funded only if an existing activity is displaced)
